

AX MANAGER – The new software for managing locking components and authorisations in System 3060

The **AX Manager (AXM)** is the successor to the Locking System Management (LSM) software. Up to 20 locking devices and 100 transponders can be managed in the AXM Lite Edition.

It is therefore particularly suitable for small companies and agencies with only a small number of doors.

GENERAL HIGHLIGHTS OF AX MANAGER:

// Modern user interface with sliding menu items in the header section, tab structures, icons and buttons

// Progressive disclosure – task-related presentation of functions. Unnecessary information is hidden, e.g. non-relevant details on transponders and locking devices

// SQL database – provides automation of own back-up routines and processes, for example

// Wizards for frequently required tasks, such as creating and deleting transponders and doors or the procedure in the event of transponder loss

// Doors and people can be assigned to more than one authorisation group and interlinked with one another

// Software grows to fulfil its tasks – AXM projects can be transferred to higher editions at any time

// TECHNICAL DATA

AXM Lite

- Entry-level solution for the new AXM software
- 20 locking devices, 100 (active) transponders, including PIN code keypad
- 1x project, 1 x locking system and 1 x user (Admin)
- Basic functions for locking system management (offline)
